## INTRODUCTION

Gecko Innovations Ltd specialize in providing engineering solutions to the construction industry.

Our team has many years experience in this particular industry and we use this to bring you significant improvements in safety, efficiency and usability.

We utilize the latest software and equipment to bring your concept through design, fabrication and completion to a delivered working solution on site.

Our lifting experts are always on hand to give advice and if you have a requirement you can speak directly to an engineer who can best understand your requirement.

We appreciate there are ever increasing restrictions on site, we understand that sometimes it can't just be done how it always was but we thrive on a challenge, so tell us what your struggling with and we will give a free consultation to discuss how to make things easier.

Gecko Innovations are proud to have received the runner up prize in the Efficiency category of the PlantWorx Awards 2017.

## TRUCKLOADER

TruckLoader has been designed to make muck away safer, easier and more efficient. Its unique technology (patent pending) allows the skip to be landed and discharged directly into tipper trucks, roll on roll off skips, barges or even onto the floor, without the need for a landing gantry.

Now, finally, your site has a viable alternative to the traditional outdated methods like boat skips and circular muck skips.

TruckLoader is available for hire and sale in a range of capacities this unique skip is already revolutionizing the methodology contractors use for their muck away requirements.

# TRUCKLOADER

## SAFE

Safety is our primary objective for every solution we provide, TruckLoader is no exception.

TruckLoader has a 100% failsafe system meaning the skip cannot be discharged accidentally in transport, this is certainly not true for traditional methods like boat skips and circular muck skips.

No operatives are required within the discharge zone reducing risk to personnel. The discharge can be controlled or even stopped if required, this minimizes the impact and loadings onto equipment and plant.

We deliver the TruckLoader fully certified and with safe use documentation and if we can be involved early enough in your project we can tailor our documentation to suit your sites specific procedures or restrictions, contact us for details.

## EASY

TruckLoader is easy to use, just fill it up, transport it to the discharge destination, land it where you want it to discharge and lift the skip to discharge.

TruckLoader does not require a gantry and can be landed directly into tipper trucks, barges, roll on roll off skips or even the floor.

## EFFICIENT

TruckLoader allows large quantities of waste to be transported directly to where you need it without re-handling, this reduces crane time as well as machine and labour costs. With no gantry required TruckLoader also takes less site space and less time to set up.

Incorporating Roll on Roll off skips would also allow sites to choose when trucks are needed to remove the waste from site allowing for more efficient planning and reduced waiting times and site congestion.

## HAVE IT YOUR WAY

Limited only by your cranes capacity we can fabricate skips to suit your specific requirement, you need to fill a truck in one hit? No problem! You can only lift 2000Kg? Again, no problem, we'll supply exactly what you need.

Gecko Innovations are proud to have received the runner up prize in the Efficiency category of the PlantWorx Awards 2017.
