

# TRUCKLOADER

TruckLoader has been designed to make muck away safer, easier and more efficient. Its unique technology (patent pending) allows the skip to be landed and discharged directly into tipper trucks, roll on roll off skips, barges or even onto the floor, without the need for a landing gantry.

Now, finally, your site has a viable alternative to the traditional outdated methods like boat skips and circular muck skips.

TruckLoader is available for hire and sale in a range of capacities and this unique skip is already revolutionizing the methodology contractors use for their muck away requirements.

## EFFICIENT

TruckLoader allows large quantities of waste to be transported directly to where you need it without rehandling, this reduces crane time as well as machine and labour costs. With no gantry required TruckLoader also takes less site space.

Incorporating Roll on Roll off skips would also allow sites to choose when trucks are needed to remove the waste from site allowing for more efficient planning and reduced waiting times and site congestion.

## SAFE

Safety is our primary objective for every solution we provide, TruckLoader is no exception. TruckLoader has a 100% failsafe system meaning the skip cannot be discharged accidentally in transport, this is certainly not true for traditional methods like boat skips and circular muck skips. No operatives are required within the discharge zone reducing risk to personnel.

The discharge can be controlled or even stopped if required, this minimises the impact and loadings onto equipment and plant.

We deliver the TruckLoader fully certified and with safe use documentation and if we can be involved early enough in your project we can tailor our documentation to suit your sites specific procedures or restrictions, contact us for details.

## EASY

TruckLoader is easy to use, just fill it up, transport it to the discharge destination, land it where you want it to discharge and lift the skip to discharge.

TruckLoader does not require a gantry and can be landed directly into tipper trucks, barges, roll on roll off skips or even the floor.

## HAVE IT YOUR WAY!

Limited only by your cranes capacity we can fabricate skips to suit your specific requirement, you need to fill a truck in one hit? No problem! You can only lift 2000Kg? Again, no problem, we'll supply exactly what you need.

Gecko Innovations are proud to have received the runner up prize in the Efficiency category of the PlantWorx Awards 2017.
